CREATED2026-04-22 · v2.8 · from eval-2401 · 23 traces tagged since

DEFINITION

S1 ingester returns only a suffix of a multi-message email thread — typically the last 1–3 messages — discarding earlier context that contains the antecedent, commitment, or condition referenced in the answer.

e.g. 14-msg client thread; only messages 13 and 14 ingested; commitment in message 5 unavailable to generator. Surface symptom: tense collapse, hallucinated commitment, or "I don't know" on a question the thread answers.

SYNONYMS / ALIASES

email_truncation ×thread_suffix_only ×message_window_clip ×context_loss ×

⚠ CONFLICT DETECTED · AMBIGUITY SCORE 0.71

Synonym "context_loss" is also aliased under C2.grounding.unsourced_claim. The same trace tag would resolve to two paths — root cause vs. downstream symptom.
