

Add New Product

Three steps to spin up a new product workspace: identity, pipeline labels, and the Evaluation Brief.

Import from template

Save draft

STEP 1PRODUCT IDENTITY

Pick a name and a category — the rest of the workspace pre-fills from your choice.

PRODUCT NAME

HeyGen

heygen.io

Used in product workspace URL

mue.indriya.io/p/heygen

CATEGORY

Selecting a category seeds default contracts, judges, and a baseline failure taxonomy.

D2A

Document-to-Audio AI

Reading material rendered as listenable audio.

E.G. HUXE · NOTEBOOKLM

D2I

Document-to-Image AI

Diagrams, charts, and visual summaries from source docs.

E.G. NAPKIN · GENMO

MMA

Multimodal Agent

Tool-using agent across text, vision, voice.

E.G. OPERATOR · COMPUTER-USE

T2V

Text-to-Video AI selected

Scripts & prompts compiled into talking-avatar video.

E.G. HEYGEN · SYNTHESIA

AVS

Async Video + AI Summary

Meeting/clip ingest → structured summary & chapters.

E.G. LOOM AI · OTTER

...

Custom

Start blank — define your own contracts & judges.

ADVANCED · 12+ SETUP STEPS

PRE-FILLS FROM CATEGORY

T2V

Text-to-Video AI

Selecting this category seeds the following defaults into your new product workspace. You can edit any of them later.

✓

Default sub-contract thresholds

Script→visual alignment

Lip sync accuracy

Avatar consistency

Scene transition

Audio→visual sync

5 sub-contracts · seeded with framework defaults (κ ≥ 0.70)

✓

Judge panel roles

Content Judge

Visual / UX Judge

Audio Judge

3 roles · each gets its own kappa floor & recalibration

✓

Failure taxonomy

Generation

Synthesis

Cross-modal junctions

18 suggested tags across 3 buckets

✓

Audio-native eval track

OPTIONAL

Optional · enable per run

✓

Category comparison reference

HeyGen

vs.

Synthesia

Benchmark dashboard auto-enabled

You can customize all of these in the Evaluation Brief

T-01

 after onboarding.

Identity is **complete** — 1 field filled, 1 category selected.
