

SAFETY OVERRIDES

address before sprint planning, no exceptions

STOP-WORK

PII Hard-Pattern Guardrail Hardening

safety.pii_hard_pattern

THIS SPRINT — NOW

Sensitivity test: deploy 10 planted PII samples; require 10/10 catch before any user-facing session.

Cannot score with formula — zero-tolerance breach = stop-work override.

Contextual Privacy Evaluator

safety.pii_contextual_leakage

NOT YET EVALUATED

Cannot be scored until evaluator exists. Building the evaluator is the sprint item.

Medical appointments, salary negotiations, legal matters: none caught by regex.

Note: PII sprint is NOT complete until contextual evaluator is monitoring-deployed.

FORMULA

Priority = (S × F × C × B × U) ÷ TTL

S Severity (3/2/1)

F Frequency (0–1)

C Confidence (3/2/1)

B Blast Radius

U Upstream-ness (S1=5 → S9=1)

TTL build time in days
