01 Design Philosophy

Practitioner-grade. Density is intentional. Tables > summary cards.

P-01 · Failures originate upstream structural rule Stage 1 always renders leftmost / topmost. Backlog safety items precede formula items. Pipelines read S1 → S9 left to right.	P-02 · Every score carries provenance data rule Each numerical score is paired with one of SIM EST REV INF LIVE. A score without a badge is an error state.
P-03 · Safety is structural, not alarm structural rule The Safety Override Strip is a permanent section preceding all contract cards. It is never collapsible, never animated, never dismissed.	P-04 · C-SAFETY is visually unique brand rule The C-SAFETY card uses card-safety styling regardless of pass/fail. It is never mistaken for a regular contract card.

02 Base Palette

Surfaces, borders, text. Stack from bg → surface-3 for nested density.

SURFACES & BORDERS

Aa Background App canvas --bg #0F1117	Aa Surface-1 Standard card body cards #1A1D27	Aa Surface-2 Nested panels, inputs panels #252836	Aa Surface-3 Hover / active state hover #2E3347	1px Border-subtle Card & divider borders #2E3244	1px Border-strong Hover & focus rings #404662
--	--	--	--	--	---

TEXT

Primary text Text-primary Headings, values, body strong #F1F5F9	Secondary text Text-secondary Body, descriptions #94A3B8	Muted text Text-muted Annotations, captions, IDs #475569
---	--	--

03 Contract Color Tokens

Five contracts + one Safety. C-SAFETY is always visually distinct.

C1 Ingestion Fidelity amber-orange #F97316	C2 Faithfulness violet #8B5CF6	C3 Factuality red #EF4444	C4 Cross-Modal Consistency blue #3B82F6	C5 Output Quality green #22C55E	C-SAFETY Safety / Privacy ⚠ ALWAYS DISTINCT deep red · card-safety #DC2626
--	--	---	---	---	---

04 Status Colors

Pass / Warn / Fail / Override + Unknown (striped) + trend triplet.

Pass #22C55E	Warn #F59E0B	Fail #EF4444	Override / Safety #DC2626	Unknown · striped #9CA3AF	Trend ▲ #34D399	Trend ▼ #F87171	Trend flat #94A3B8
----------------------------	----------------------------	----------------------------	---	---	-------------------------------	-------------------------------	----------------------------------

05 Pipeline Stage Colors

S1 is most upstream & most critical. Render left → right always.

ALL FIVE VARIANTS

BADGE	TOKEN	DEFINITION	COLOR STOPS
SIM	[SIM]	Simulated — generated synthetically, not observed in production.	text · bg · border
EST	[EST]	Estimated — modeled from priors, not directly measured.	
REV	[REV]	Review-derived — computed from human review labels.	
INF	[INF]	Architectural inference — derived from known system structure.	
LIVE	[LIVE]	Live-measured — observed on production traffic, latest 24h window.

Motion Rules

Safety-class surfaces never animate. Motion communicates state, not delight.

ELEMENT	BEHAVIOR	DURATION	CURVE
Safety Override Strip	NO MOTION No entrance, pulse, or dismiss animation.	—	—
C-SAFETY card	NO MOTION No animation on status change.	—	—
HOLD / ROLLBACK verdict bars	STATIC Completely static — no transitions.	—	—
Evidence badge · initial render	NO POP-IN Badges appear with the score, no entrance animation.	—	—
Evidence badge tooltip	Fade-in on hover with 200ms delay.	120ms	ease-out
Contract card · hover	Background color transition to surface-3.	150ms	ease
Pipeline node · hover	Scale to 1.03.	150ms	ease
Pipeline node · high-failure (>20%)	Border pulse ×3 then stops. Not infinite.	3s · 3 cycles	ease-in-out
Loading · shimmer skeleton	Skeleton shimmer with 150ms card-to-card stagger.	1.5s · ∞	linear

Motion intent: motion is reserved for **discovery** (hover) and **attention** (failure pulse, finite). Safety-class surfaces are intentionally inert so that operators cannot mistake an animation for a state change.
